## Hand Pack Tables & Stations

### *Semi-automatic, ergonomic solutions.*

Multi-Conveyor builds optimum [hand-pack stations](#) to lessen the load of your current manual application by providing a semi-automatic, ergonomic, cost effective solution.

This recently built system includes a tilt bed for the empty cases that can be adjusted to best facilitate hand placement of the cartons into the cases. The two pneumatic stops are operator controlled and hold the cases in position at the two load stations.

Operators can then release the cases downstream which automatically triggers the upstream pneumatic 90 degree pusher to deliver an empty case down the rod chute to the first operator position.

Ergonomic designs lessen the strain on operators by minimizing reach requirements, incorporating foot rests, and adding hydraulic, pneumatic or hand-wheel height adjustments.

Multi-Conveyor can provide an efficient packing operation in painted steel or stainless steel construction.

We can meet your [sanitary requirements](#), integrate with your current line equipment, provide turnkey systems, and incorporate most any specialty request.

### **Best Value Guaranteed**

Multi-Conveyor is more than just another chain conveyor manufacturer. We build as many belts, chains, and other devices as we do conveyors. In many cases, this gives you the cost advantage of the one-stop shop suppliers.

All of our [equipment is manufactured at our facility and all fabrication is done in-house](#). We ship directly from our floor to your door. In order to maintain our position as a leading conveyor manufacturer, **we believe in reinvesting in our facility.**

Multi-Conveyor recently added this Trumatic L3030 CNC Laser to our arsenal of manufacturing machinery. Our dedication to state-of-the-art equipment is just another way that Multi-Conveyor brings value to every product we make.

What better value can you expect after all that? From engineering, design, service, technical support, and our commitment to quality, we have it all.

Give us a shot: **1-800-236-7960.**
