## **Pneumatic Actuated Adjustable Guide Rails w/Product Clamp**

*77' long "workhorse" conveyor*

[Multi-Conveyor](#) recently built this 77' long stainless steel constructed, straight running [plastic belt conveyor](#) to move different size height and width tubs of product.

This particular line incorporates adjustable pneumatic actuated guide rails that can be triggered narrow or wider based on the width of the product sizes along with a double high traffic clamp to halt production at the customer's demand.

A traffic clamp was incorporated that can be open and closed while the product is in motion. The product clamp can also be closed prior to the products arrival to that point of the conveyor when a predetermined stoppage in the line is necessary.

The pneumatic guide rail system is commonly referred to in our industry as "RCO Rail" for Rapid Change Over. It is most commonly utilized in overhead conveyor systems where operators cannot access the conveyors to make rail-opening changes.

However, RCO's are also utilized on floor level conveyors where rapid conveyor changeovers (RCO's) are needed to accommodate different product widths but do not have time for operators walk through a conveyor system changing each individual guiderail bracket.

The pneumatics and clamps can be placed at intervals as required by the customer.

## **Stu Tribbey is Moving onto Greener Pastures**

It is with regret but warm wishes that Multi-Conveyor announces the retirement of [Stu Tribbey](#), Account/Project Manager. Stu was an integral part of our sales and project management staff who took unique care of his representative and customer client base.

We are indebted to his 6 years of service with Multi-Conveyor, but also for his 21 years overall as a veteran in the conveyor industry. Stu's commitment has surely assisted in propelling Multi-Conveyor to our present position in the marketplace. We will regard his loyalty and friendship for years to come.

For all of Stu's clients, don't worry, you still have time to reach him. There will be a transitional period before he hands the baton over to [Rick Hollmaier](#) who will eventually be picking up where Stu leaves off. Rick, also a veteran, has been in the conveyor industry for 28 years and we are confident he will continue Stu's legacy with honor.

Congratulations, Stu! We all wish you many years of rest and relaxation. You deserve it!
